DETAILED ACTION

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 01/13/06 has been entered.

Response to Arguments

2. Applicant's arguments filed on 01/13/06 have been fully considered but they are not persuasive. Applicant appears to argue that Lin's "tone patterns" are different from claimed tone information/data. In response, the claimed language does not particularly and uniquely distinguish the argued tone information/data from the applied art. Neither the claim nor the specification provides particular definition exchanging tone patterns. Lin's tone patterns are, in fact, tone information.

Examiner's Remark

3. Claim 8 does not contain the proper status identifier. It is understood as "currently amended."

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) The invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the

applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

5. Claims 1- 3, 8 – 10 are rejected under 35 U.S.C. 102(b) as being anticipated by Lin et al. (6366791).

Regarding claim 1, Lin et al. disclose a mobile communication terminal equipped with an Internet browser function, comprising: means for fetching melody data from a web-based server apparatus by using said browser function (col. 3, lines 9-29; col. 4, lines 1-11; Figs. 2, 4, the mobile stations comprise the capability to access the web page of the network in order to download musical scores, that is melody data, containing ringing tones); and tone setting means for setting ringing tones based on tone information contained in said melody data (col. 4, lines 1-57; col. 5, lines 1-2; col. 5, lines 16-27; Fig2. 2, 4, the ringing tones can be implemented once received and stored within the SIM, where the ringing tones are programmed in accordance with the ringing tone patterns).

Regarding claim 2, Lin et al. disclose the mobile communication terminal, wherein if said melody data contains no tone information, said tone setting means sets a ringing tone based on preset tone information (col. 3, lines 31-67; col. 4, lines 1-11, the download is executed based on the contents of the music or tones desired by the subscriber and approved beforehand by the subscriber; if no tone is approved, hence, no tone would be downloaded, and indeed the same tone some tones already stored will stay active).

Art Unit: 2681

Regarding claim 3, Lin et al. disclose the mobile communication terminal, wherein if said melody data contains tone information, said tone setting means judges the validity of said tone information (col. 3, lines 31-67; col. 4, lines 1-11; Fig. 2, the system may determine the type of tones to be downloaded during the decision to acquire the tones from the web server).

Regarding claim 8. Lin et al. disclose a ringing method for a mobile communication terminal equipped with an Internet browser function, comprising: having access to a web-based server equipment by means of said browser function (col. 3, lines 9-29; col. 4, lines 1-11; Fig. 2, refs. 35, 40, 45, 55; Fig. 4, the mobile stations comprise the capability to access the web page of the network in order to download musical scores, that is melody data); notifying said server equipment of desired melody data in conformity with said access (col. 3, lines 21-29; Fig. 2, the terminal may be used to request musical tones from the server via the Internet); receiving said desired melody data from said server equipment (col. 3, lines 31-46; col. 4, lines 1-11, the mobile obtains the musical tones from the server for later playing); storing said received desired melody data (col. 2, lines 22-57; col. 4, lines 12-38; Fig. 4, the terminal possesses the capability to store the melody tones within); judging whether said stored melody data contains tone information (col. 3, lines 31-67; col. 4, lines 1-11; Fig. 2, the system may determine the type of tones to be downloaded during the decision to acquire the tones from the web server); fetching said tone information if it is judged that said melody data contains the tone information (col. 3, lines 31-67; col. 4, lines 1-11; Fig. 2, 4, the system may determine the type of tones to be downloaded during the

3, lines 9-46).

decision to acquire the tones from the web server); setting a tone for playing a melody in accordance with said melody data, based on said fetched tone information (col. 4, lines 1-57; col. 5, lines 1-2; col. 5, lines 16-27, the ringing tones can be implemented once received and stored within the SIM, where the ringing tones are programmed in accordance with the ringing tone patterns); and playing said melody in said set tone (it is inherent as evidenced by the fact that one of ordinary skill in the art would have recognized that the tone is to be played as soon as a ringing melody is downloaded, col.

Page 5

Regarding claim 9, Lin et al. disclose the ringing method for a mobile communication terminal, wherein if said melody data contains no tone information, a ringing tone is set based on preset tone information (col. 3, lines 31-67; col. 4, lines 1-11, the download is executed based on the contents of the music or tones desired by the subscriber and approved beforehand by the subscriber; if no tone is approved, hence, no tone would be downloaded, and indeed the same tone some tones already stored will stay active).

Regarding claim 10, Lin et al. disclose the ringing method for a mobile communication terminal, wherein if said melody data contains tone information, the validity of said tone information is judged (col. 3, lines 31-67; col. 4, lines 1-11; Fig. 2, the system may determine the type of tones to be downloaded during the decision to acquire the tones from the web server).

Claim Rejections - 35 USC § 103

- 6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 7. Claims 4-7, 11-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lin et al. (6366791) in view of Yoshino et al. (6308086).

Regarding claims 4, 11, Lin et al. do not explicitly disclose the mobile communication terminal, wherein said tone setting means sets ringing tones by performing a modulation processing based on said tone information contained in said melody data.

Yoshino et al. teach a mobile communications terminal with extraction of audio signal frequencies means, which, in turn need to be converted to readable form to a transducer (col. 4, lines 32-40).

Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to further implement the communication terminal of Lin et al. so as to include modulation processing as per the teachings of Yoshino et al. so that the set ringing tones in the musical scores can be executed as ringing tone patterns on the MS.

Regarding claims 5, 12, the combination of Lin and Yoshino discloses, wherein said tone information contained in said melody data constitutes tone parameters used

for said modulation processing (Yoshino, col. 4, lines 34-36, the extracting of frequency components from the audio signal, corresponds to ringing or tone parameters).

Regarding claims 6, 7, 13, 14, Lin et al. do not explicitly disclose the mobile communication terminal, further comprising: ringing-speed setting means for setting a tempo at which a melody is played in accordance with said melody data.

Yoshino et al. teach a mobile communications terminal with periodicity controlling means to control the rhythm of a melody to be reproduced (col. 2, lines 54-55; col. 6, 16-27).

Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to further implement the communication terminal of Lin et al. so as to include rhythm computational means as per the teachings of Yoshino et al. so as to have means of a timing signal for setting a tempo; that is, the relative speed at which music is played in accordance with the melody data being received.

Conclusion

8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Julio R. Perez whose telephone number is (571) 272-7846. The examiner can normally be reached on 7:00 - 4:00 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Joseph H. Feild can be reached on (571) 272- 4090. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Application/Control Number: 09/759,220
